To: Hiring Team, bet365

Regarding: Senior Software Developer – FollowScores (Backend)

Dear Hiring Team,

I am writing to express my enthusiastic interest in the Senior Software Developer position for the FollowScores app at bet365. With over 4 years of software engineering experience designing high-performance system architectures, data pipelines, and scalable infrastructures, I am eager to apply my technical background to support your massive operational scale of 120 million global customers and high-concurrency peak live traffic.

The FollowScores roadmap demands a blend of robust real-time data delivery, backend optimization, and technical leadership. Here is how my background directly aligns with your team's core needs:

Core Backend & High-Availability Systems

- **Golang & REST APIs:** I have direct experience building real-time, service-based applications in Go. I developed *FinBot*, a real-time trading simulation chatbot built in Go integrated with live Twitch chat and a PostgreSQL backend. Additionally, I built the *MTG Card Reader* application, deploying a Golang REST API mapped against a PostgreSQL database.
- **Scalable Cloud Infrastructure:** While your core stack leverages GCP, my deep expertise in designing serverless infrastructures, automated workflows, and multi-tenant SaaS platforms on AWS (utilizing Lambda, Step Functions, and automated pipelines) provides a highly transferable foundation to seamlessly adapt to, maintain, and scale your cloud-backed services.
- **Performance Optimization:** I thrive on optimizing complex, high-throughput systems. At the UK Data Service, I migrated quantitative disclosure algorithms from R to C++, achieving an 11x performance improvement and enabling real-time processing for datasets exceeding 500k records. I also achieved an 8x simulation runtime reduction by migrating legacy macroeconomic frameworks to C++.

Technical Leadership, Mentorship & Governance

- **Team Mentorship:** I have a proven record of coaching and distributing technical knowledge. As an ML Instructor at the University of Essex, I successfully taught Data Structures, core programming languages, and advanced technical concepts to over 100 undergraduate and postgraduate students.
- **Active Quality Governance:** I am passionate about setting high standards for code quality and testing. I designed an automated quality assurance framework tailored for complex codebases, successfully reducing manual code review times by 70% while maintaining production stability and strict security standards.
- **End-to-End Delivery:** I have architected production-grade CI/CD pipelines using GitHub Actions to transition complex codebases from experimentation to stable weekly release cycles,

reducing engineering overhead by 60%.

With a PhD in Computational Finance, I possess a unique blend of deep analytical capability and rigorous software engineering principles. I am incredibly excited about the opportunity to join bet365, collaborate with a dynamic team, and help push the boundaries of what is possible for the FollowScores userbase.

Thank you for your time and consideration. I welcome the opportunity to discuss how my backend expertise and leadership experience can contribute to your development roadmap.

Sincerely,
Ivan Evdokimov, Ph.D.
